2025 - 2026

Certificate

This is certifying that the project report **“Semester internship project report on Strategic Product Placement Analysis”** are bona fide work done and Submitted by **“PASUPULETI PAVAN KUMAR(0425046005),VANKADARI PUNESH (0425046009),PALA CHANDRAMOULI (0425046044), AYYAR RAMU(0425046001)”**, In Partial Full Filament of the requirements for the award of the Degree of Computer Applications by the affiliated to SRI VENKATESWARA UNIVERSITY, TIRUPATI, during the Year 2025 – 2026

PROJECT GUIDE

PRINCIPAL

Head of the Department

External Examiner

ACKNOWLEDGEMENT

We would like to express our gratitude to all those who have been instrumental in the presentation of this project.

We are very much grateful to **Mr. P. RAVI VENKATESH, B.E.**, Correspondent of **GAYATRI DEGREE COLLEGE**, for his great support.

We are very much grateful of **Mrs. P. LAKSHMI, M.A., Director** of **GAYATRI DEGREE COLLEGE**, for her great support.

We are thankful to **Dr. P. VENUGOPAL RAO, M.Sc, M.Phil, PhD, MBA, PRINCIPAL** of **GAYATRI DEGREE COLLEGE**, for giving her continuous support to our internship.

We are happy to express our gratitude to **Mr. P. MADHU SUDHAN, M.Sc. (Computer Science). Lecturer in Computers, GAYATRI DEGREE COLLEGE**, for his constant motivation and valuable support for completing the internship.

It gives us pleasure to acknowledge our indebtedness to **All Teaching Faculties** and we are very much thankful to **our parents** for their substantial moral support and encouragement in our studies.

Place: TIRUPATI

Date:

DECLARATION

We hereby declare that the Project Work Entitled “**Semester internship project report on Strategic Product Placement Analysis**” is record of Group Research Work and, it has been carried out by us During the period of our study, Submitted to **SRI VENKATESWARA UNIVERSITY, TIRUPATI** under the Supervision of **Mr. P. MADHU SUDHAN, M.Sc (Computer Science), Lecturer in Computers, GAYATRI DEGREE COLLEGE, TIRUPATI.**

The award of the Degree of Bachelor of Computer Applications is our original work, has not been submitted to any other university for the award of any Degree.

Date:27/06/2025

Place: TIRUPATI

Signature of the Students

CHAPTER – 01 INTRODUCTION

1.1 – Project Overview

This project, Strategic Product Placement Analysis: Unveiling Sales Impact with Tableau Visualization, focuses on analyzing sales data to identify how different placement strategies affect product performance. By leveraging Tableau's interactive dashboards, visual analytics, and trend analysis capabilities, the study transforms complex datasets into meaningful insights, enabling businesses to evaluate placement effectiveness, compare regional and category-level performance, and make data-driven merchandising decisions. Ultimately, the project demonstrates how visualization-driven analytics can support optimized product positioning, improved sales outcomes, and smarter strategic planning.

In today's competitive business environment, strategic product placement has become a critical factor influencing consumer purchasing decisions and overall sales performance. Effective placement strategies-whether in retail stores, supermarkets, or online platforms-can significantly enhance product visibility, customer engagement, and revenue generation. However, measuring the true effectiveness of these strategies requires structured data analysis and visual interpretation.

The project titled "Strategic Product Placement Analysis": Unveiling Sales Impact with Tableau Visualization" aims to evaluate how different product placement strategies impact sales outcomes. By utilizing Tableau's powerful data visualization and analytical features, the project transforms raw sales data into interactive dashboards and meaningful insights. The analysis focuses on identifying trends, comparing performance across product categories and regions, and understanding the relationship between placement position and revenue generation.

Through visual storytelling and data-driven decision-making, this project enables businesses to optimize merchandising strategies, improve sales performance, and enhance overall operational efficiency. It demonstrates how business intelligence tools like Tableau.

1.2 – Purpose of the Project

The main purpose of the Strategic Product Placement Analysis project is to analyze how product placement, pricing, promotions, and customer behavior influence sales performance in a retail environment. The project helps businesses identify the most effective locations for displaying products to maximize visibility, customer engagement, and revenue.

By examining factors such as product categories, foot traffic, consumer demographics, competitor pricing, and promotional activities, the analysis provides valuable insights into customer purchasing patterns. These insights enable retailers to make informed decisions regarding store layout, product positioning, and marketing strategies.

The project aims to:

- Identify the best product placement locations to increase sales.
- Analyze the relationship between foot traffic and sales volume.
- Evaluate the impact of product categories on sales performance.
- Understand customer preferences based on demographic data.
- Assess the effectiveness of promotional activities.
- Compare product prices with competitor prices to improve pricing strategies.
- Optimize store layouts for better customer experience.
- Support data-driven decision-making in retail management.
- Improve overall business profitability and operational efficiency.
- Enhance customer satisfaction by making products easier to find and purchase.

Overall, the project helps retailers use data analytics to improve product visibility, increase sales, and achieve better business outcomes.

CHAPTER – II

IDEATION PHASE

2.1 – Problem Statement

In the retail industry, product placement plays a crucial role in influencing customer purchasing decisions and overall sales performance. Many retailers face challenges in determining the most effective locations for displaying products within a store. Improper product placement can lead to reduced product visibility, lower sales, inefficient utilization of shelf space, and decreased customer satisfaction.

Retail businesses generate large amounts of data related to sales volume, customer demographics, foot traffic, product categories, pricing, promotions, competitor pricing, and product positioning. However, this data is often underutilized, making it difficult for retailers to identify the factors that significantly impact product performance and customer buying behavior.

The main problem is to analyze retail data and identify the relationship between product placement and sales performance. By using data visualization and analytical techniques, businesses can determine optimal product positions, improve store layouts, enhance promotional effectiveness, and maximize sales revenue. Therefore, this project aims to perform Strategic Product Placement Analysis to provide data-driven insights that support better merchandising decisions and improve overall retail business performance.

MAX MARKS	4 MARKS

2.2 – Empathy Map Canvas

Strategic Product Placement Analysis

Empathy Map Canvas Designed for: Strategic Product Placement Analysis Designed by: Your Team Date: DD/MM/YYYY Version: 1.0

The diagram is a large rectangle divided into seven numbered sections around a central face. The face has a large open mouth pointing right, a small eye, and a large ear on the left. The sections are:

- 1 Who are we empathizing with?**
Identify the target customer group for product placement analysis within the retail environment.
- 2 What do they need to DO?**
Understand customer tasks related to shopping and finding products in the store efficiently.
- 3 What do they THINK and FEEL?**
This section is split into two columns:
 - PAINS**
Identify customer frustrations and challenges.
 - GAINS**
Identify what makes their shopping experience successful.
- 4 What do they SEE?**
Observe what customers notice in the store, including product displays, signage, promotions, and store layout.
- 5 What do they SAY?**
Capture customer feedback and opinions about their shopping experience.
- 6 What do they HEAR?**
Identify what customers hear from store staff, other shoppers, and marketing messages in the store.
- 7 What do they DO?**
Analyze customer actions such as browsing, selecting products, and purchasing.

Below the face, a line indicates: "What other thoughts and feelings might motivate their behavior?"

At the bottom left: "Analyze customer insights to improve product placement and increase sales." At the bottom right: "Empathy Map Canvas"

1. Who are we empathizing with?

Retail Store Customers

- Customers visiting stores to purchase products.
- Different age groups, income levels, and shopping preferences.
- Customers looking for convenience, quality, and value.

2. What do they need to do?

- Find products quickly and easily.
- Compare products and prices.
- Make informed purchasing decisions.
- Complete shopping efficiently.

3. What do they THINK and FEEL?

Pains

- Difficulty finding products.
- Confusing store layouts.
- Lack of product information.
- Long shopping time.

Gains

- Easy product access.
- Well-organized shelves.
- Attractive promotions and discounts.
- Quick and convenient shopping experience.

4. What do they SEE?

- Product displays and shelf arrangements.
- Promotional offers and advertisements.
- Product prices and labels.
- Store cleanliness and organization.
- Competitor products and brands.

5. What do they SAY?

- I can't find the product I need.
- This store is easy to navigate.
- The discounts are attractive.
- Products should be organized better.
- I prefer products displayed at eye level.

6. What do they HEAR?

- Recommendations from friends and family.
- Store announcements and promotions.
- Staff suggestions and assistance.
- Advertisements on social media and television.
- Customer reviews and feedback.

7. What do they DO?

- Browse product categories.
- Compare prices and brands.
- Check promotions and discounts.
- Purchase preferred products.
- Provide feedback and reviews.

Goal

To optimize product placement by analyzing customer behavior, sales performance, foot traffic, pricing, and promotional effectiveness, thereby improving customer satisfaction and increasing sales revenue.

MAX MARKS	4 MARKS

2.3 – Brainstorming

The brainstorming phase of the Strategic Product Placement Analysis project focuses on identifying the key factors that influence product visibility, customer purchasing behavior, and overall sales performance in a retail environment. The primary objective is to understand how strategic placement of products within a store can improve customer engagement and maximize revenue.

This analysis considers multiple aspects, including product categories, product positioning, pricing strategies, promotional activities, customer demographics, foot traffic patterns, and competitor pricing. By examining these factors, businesses can gain valuable insights into customer preferences and purchasing trends. Products placed in high-traffic areas often receive greater visibility, leading to increased sales, while effective promotional strategies can further enhance customer interest and buying decisions.

Strategic Product Placement Analysis

The brainstorming process also emphasizes the importance of data analytics and result evaluation. Through data-driven analysis, retailers can identify high-performing product categories, determine the most effective shelf locations, and evaluate the impact of promotions on sales volume. Understanding the relationship between product placement and customer behavior enables businesses to optimize store layouts and improve the shopping experience.

Additionally, market analysis and internal business analysis help organizations assess competitive positioning, resource utilization, and pricing effectiveness. These insights support informed decision-making and contribute to better inventory management, improved product accessibility, and enhanced customer satisfaction.

Overall, the brainstorming stage serves as the foundation for the Strategic Product Placement Analysis project. It helps define the problem, identify relevant data sources, establish analytical objectives, and generate ideas for visualization and dashboard development. The knowledge gained from this process enables retailers to implement effective product placement strategies that drive sales growth, improve operational efficiency, and create a competitive advantage in the marketplace.

CHAPTER – III

REQUIREMENT ANALYSIS

3.1 – Customer Journey Map

STRATEGIC PRODUCT PLACEMENT ANALYSIS

Customer Journey Map

1. Awareness

At this stage, customers become aware of the store or product through channels such as social media advertisements, informative websites, and store visits. Strategic placement of products and promotional displays helps attract customer attention and create interest.

2. Engagement

Customers actively explore products and compare options. Factors such as discount offers, pricing expectations, web content, and product demonstrations influence their decisions. Proper product placement in visible and high-traffic locations increases customer interaction and engagement.

3. Purchase

Customers make their buying decision and complete the transaction. Accessibility, queue management, friendly staff, and easy return policies contribute to a positive purchasing experience. Strategic placement near checkout areas can also encourage impulse purchases.

4. Advocacy

After using the product, customers evaluate their experience. High levels of satisfaction and quality customer service encourage customers to recommend products to friends, family, and peers. Positive experiences strengthen brand reputation and customer trust.

5. Retention

Satisfied customers return for future purchases and provide feedback. Businesses can use this feedback to improve store layouts, product placement strategies, and overall customer experience. Effective retention strategies help build long-term customer loyalty.

Importance in Strategic Product Placement Analysis

- Enhances product visibility and accessibility.
- Improves customer engagement and shopping experience.
- Increases sales through effective shelf positioning.
- Encourages impulse buying and cross-selling opportunities.
- Supports data-driven decision-making.
- Improves customer satisfaction and loyalty.
- Maximizes store performance and profitability.

Conclusion

The Customer Journey Map helps businesses understand customer interactions throughout the shopping process. By strategically placing products at key touchpoints across the Awareness, Engagement, Purchase, Advocacy, and Retention stages, retailers can enhance customer satisfaction, optimize sales performance, and build strong long-term customer relationships.

MAX MARKS	4 MARKS

3.2 – Solution Requirement

STRATEGIC PRODUCT PLACEMENT ANALYSIS

Customer Solution Requirements represent the needs and expectations of customers that must be fulfilled through effective product placement strategies. In the retail environment, customers seek convenience, accessibility, and a seamless shopping experience. Strategic Product Placement Analysis focuses on understanding customer behavior and positioning products in locations that maximize visibility, improve accessibility, and support purchasing decisions.

One of the primary requirements is easy product accessibility. Customers should be able to locate products quickly without spending excessive time searching. Products placed in easily accessible areas help reduce customer effort and improve shopping efficiency.

Strategic Product Placement Analysis

Similarly, clear product visibility is essential, as customers are more likely to purchase products that are prominently displayed at eye level or in high-traffic locations.

Customers also expect a well-organized store layout that allows smooth navigation throughout the store. Grouping related products together enables customers to find items easily and encourages additional purchases. Strategic placement of complementary products supports cross-selling opportunities and enhances customer convenience.

Another important requirement is accurate and visible pricing information. Customers rely on clear pricing labels and promotional information to compare products and make informed decisions. Attractive promotional displays and special offers further capture customer attention and increase engagement with products.

Customers seek a positive and hassle-free shopping experience. Effective product placement minimizes confusion, reduces search time, and helps customers make faster purchasing decisions. Understanding customer demographics and buying patterns also allows retailers to position products according to customer preferences, creating a more personalized shopping experience.

In addition, customers expect consistent product availability. Frequently purchased and high-demand products should always be visible and adequately stocked to prevent customer dissatisfaction. Proper shelf management ensures that products remain accessible and available when customers need them.

Strategic Product Placement Analysis addresses these requirements by using data-driven insights to optimize product locations, improve store layouts, and enhance customer satisfaction. By meeting customer needs for accessibility, visibility, convenience, and availability, retailers can increase sales performance, strengthen customer loyalty, and create a more effective shopping environment. Ultimately, aligning product placement strategies with customer solution requirements contributes to both business success and an improved customer experience.

3.3 – Data Flow Diagram

The diagram illustrates the complete workflow of a product ordering system used in Strategic Product Placement Analysis. It demonstrates how customers interact with the product catalogue, shopping cart, payment system, and shipping services, while administrators manage product information and order processing. The workflow helps businesses understand customer purchasing behavior and optimize product placement strategies to improve sales performance and customer satisfaction.

1. Catalogue Management

The process begins with the Administrator updating and maintaining the product catalogue. The catalogue contains information about available products, categories, pricing, and promotional details. Keeping the catalogue updated ensures customers have access to accurate product information.

2. Customer Browsing

Customers browse the catalogue to explore available products. Effective product placement within the catalogue improves visibility and helps customers discover products quickly. Strategic arrangement of products can influence purchasing decisions and increase engagement.

3. Adding Products to Cart

After selecting a product, customers add it to the shopping cart. The system records product details and quantities. This stage is important because product visibility and accessibility directly impact the likelihood of products being added to the cart.

4. Shopping Cart Management

Customers can view and edit cart contents before finalizing their purchase. The shopping cart provides flexibility to update quantities, remove products, or review selected items. This step improves customer convenience and reduces purchase errors.

5. Checkout Process

Once customers are satisfied with their selections, they proceed to checkout. Product details from the shopping cart are transferred to the checkout process where shipping and billing information are verified.

6. Payment Gateway

The payment gateway securely processes transactions. Payment information is sent to the credit card company for authorization, and the payment status is returned to the system. Successful payment confirmation allows the order to move forward for fulfillment.

7. Order Processing

Order and billing information are communicated to the administrator for record management and monitoring. Proper order processing ensures accuracy and customer satisfaction.

8. Shipping and Delivery

After payment approval, the system issues a shipping request to the shipping agent. The shipping agent handles order delivery, completing the purchasing cycle and ensuring products reach customers efficiently.

Importance in Strategic Product Placement Analysis

- Improves product visibility and accessibility.
- Enhances customer shopping experience.
- Supports efficient order and inventory management.
- Increases customer engagement and purchase likelihood.
- Streamlines payment and delivery processes.
- Provides insights into customer buying behavior.
- Helps optimize product placement strategies for higher sales.

Conclusion

The Product Ordering and Customer Interaction Workflow demonstrates how customers move from product discovery to final delivery. By integrating catalogue management, shopping cart functionality, payment processing, and shipping services, businesses can create a seamless shopping experience. This workflow supports Strategic Product Placement Analysis by providing valuable insights into customer behavior, improving operational efficiency, and maximizing sales performance.

3.4 – Technology Stack

Python, Tableau Desktop, PyCharm, Git, Microsoft Word, Excel/CSV Datasets, Windows 10/11. The Strategic Product Placement Analysis project uses data analytics, visualization, and development tools to evaluate product placement strategies and sales performance. Python is used for data analysis, Tableau Desktop for creating interactive dashboards and visualizations, and PyCharm for development. Git supports version control, while Microsoft Word is used for documentation and report preparation. These technologies help in efficient data analysis, visualization, and decision-making.

Hardware Requirements

- Processor: Intel Core i5 Processor
- RAM: 8 GB
- Storage: 256 GB SSD

Software Requirements

- Tableau Desktop – Data visualization and dashboard creation
- Python – Data analysis and processing
- PyCharm – Python development environment
- Git – Version control and project management
- Microsoft Word – Documentation and report preparation

Technology Stack Summary

Component	Technology Used
Data Visualization	Tableau Desktop
Programming Language	Python
IDE	PyCharm
Version Control	Git
Documentation	Microsoft Word
Data Source	Excel / CSV Files
Dashboard Development	Tableau Dashboards & Stories
Operating System	Windows 10/11

CHAPTER – IV

PROJECT DESIGN

4.1 – Problem Solution Fit

Problem

Retail stores often struggle to determine the best locations for products within the store. Poor product placement can lead to:

- Low product visibility.
- Reduced customer engagement.
- Decreased sales volume.
- Ineffective promotional campaigns.
- Difficulty understanding customer buying behavior.
- Inefficient utilization of store space.
- Challenges in identifying high-performing product categories.

Solution

Strategic Product Placement Analysis uses data analytics and visualization techniques to identify the most effective product placements by analyzing:

- Product categories and sales performance.
- Customer demographics and purchasing patterns.
- Foot traffic movement within the store.
- Product positioning and visibility.
- Promotional activities and their impact on sales.
- Competitor pricing and market trends.

Interactive Tableau dashboards help managers visualize trends and make data-driven decisions regarding store layout and product arrangement.

Problem-Solution Fit

- Identifies the most effective product placement locations.
- Improves product visibility and customer attention.
- Increases sales through data-driven placement strategies.
- Analyzes customer behavior and purchasing patterns.
- Evaluates the impact of promotional activities on sales.
- Optimizes store layout using foot traffic analysis.
- Supports better inventory and shelf-space management.
- Provides interactive dashboards for informed decision-making.
- Helps retailers maximize revenue and profitability.
- Enhances the overall customer shopping experience.

Outcome

The project enables retailers to make informed decisions about product placement, leading to improved sales performance, better customer engagement, optimized store operations, and increased business profitability.

4.2 – Proposed Solution

The proposed solution is to develop a data-driven Strategic Product Placement Analysis system that helps retailers identify the most effective locations for displaying products within a store. The system analyzes sales data, product categories, customer demographics, foot traffic, product positions, promotions, and competitor pricing to understand the factors influencing product performance.

Using Tableau dashboards and visual analytics, the solution provides insights into customer purchasing behavior and product sales trends. Retail managers can use these insights to optimize store layouts, improve product visibility, and place high-demand products in strategic locations to maximize customer attention and sales.

Key Components of the Proposed Solution

- Collect and analyze retail sales and product placement data.
- Study customer demographics and purchasing patterns.
- Evaluate the impact of product positions on sales volume.
- Analyze foot traffic to identify high-visibility store areas.
- Measure the effectiveness of promotional campaigns.
- Compare product pricing with competitor pricing strategies.
- Create interactive Tableau dashboards and stories for visualization.
- Generate actionable insights for improving product placement decisions.

Expected Benefits

- Increased sales and revenue.
- Improved product visibility.
- Better customer shopping experience.
- Optimized store layout and shelf-space utilization.
- Enhanced decision-making through data-driven insights.
- More effective promotional and marketing strategies.

The proposed solution enables retailers to strategically position products based on analytical insights, resulting in improved business performance, customer satisfaction, and profitability.

4.3 – Solution Architecture

Data Sources

The system collects data from various retail-related sources such as:

- Product Information
- Sales Data
- Customer Demographics
- Foot Traffic Data
- Promotion Data
- Competitor Pricing Data

Data Collection & Storage

- Gather data from retail databases, spreadsheets, and sales systems.
- Store the collected data in a centralized repository for analysis.

Data Preprocessing

- Data Cleaning
- Removing Duplicate Records
- Handling Missing Values
- Data Transformation and Formatting

Data Analysis Layer

- Product Category Analysis
- Sales Volume Analysis
- Customer Behavior Analysis
- Product Position Analysis
- Promotion Effectiveness Analysis
- Competitor Price Analysis

- Foot Traffic Analysis

Visualization Layer (Tableau)

- Interactive Dashboards
- Charts and Graphs
- Packed Bubble Charts
- Scatter Plots
- Bar Charts
- Tableau Stories

Insights & Recommendations

- Best Product Placement Locations
- High-Performing Product Categories
- Customer Purchase Trends
- Promotion Performance Insights
- Pricing Strategy Recommendations.

Business Outcomes

- Increased Sales Volume
- Improved Product Visibility
- Better Customer Experience
- Optimized Store Layout
- Data-Driven Decision Making
- Higher Profitability

CHAPTER – V

PROJECT PLANNING AND SCHEDULING

5.1 – Project Milestones & Tasks

1. Data Collection & Extraction

The first step is to collect retail product placement data, sales data, customer demographic data, foot traffic data, promotion data, and competitor pricing data from reliable retail datasets or open-source sources. The data is imported into Tableau from CSV, Excel, or database files and checked for completeness, consistency, and accuracy.

2. Data Preparation

The collected data is cleaned by removing missing values, duplicate records, and inconsistencies. Data types and field names are corrected, calculated fields are created where necessary, and the dataset is structured to support effective analysis of product placement and sales performance.

3. Data Visualization

Various visualizations such as bar charts, line charts, scatter plots, packed bubble charts, and heat maps are created to analyze product categories, sales volume, customer demographics, product positions, promotions, and foot traffic patterns. KPI indicators for Average Sales Volume, Product Performance, and Promotion Effectiveness are also developed.

4. Dashboard Development

All visualizations are integrated into interactive Tableau dashboards. Filters for Product Category, Product Position, Customer Segment, Promotion Type, and Sales Volume are added to enable users to explore the data efficiently through a user-friendly interface.

5. Story Creation

Tableau Story Points are used to present the analysis in a logical sequence. The story highlights sales trends, customer purchasing behavior, product placement effectiveness, and business recommendations using visual narratives and analytical insights.

6. Performance Testing

The dashboards are tested for accuracy, responsiveness, and performance. Calculations are validated, filters are verified, and unused fields or worksheets are removed to ensure smooth operation and reliable results.

7. Web Integration

The completed dashboards and stories are published on Tableau Public. The generated embed code is integrated into a Flask-based web application, allowing users to access interactive visualizations through a responsive website.

8. Project Demonstration & Documentation

Finally, the project is presented by explaining its objectives, methodology, dashboard features, story insights, and key findings. A comprehensive project report containing screenshots, architecture diagrams, analysis results, conclusions, and future scope is prepared as part of the documentation.

5.2 – Sprint Delivery Plan

Sprint Plan for Strategic Product Placement Analysis.

Sprint Day(s)	Task	Expected Outcome
Day 1 – Day 18	Smart Bridge Live Sessions	Attend 18 live sessions to learn Tableau, data visualization, dashboard design, and project implementation concepts.
Day 19	Data Collection	Collect retail product placement data, sales data, customer demographic data, foot traffic data, promotion data, and competitor pricing data from open-source datasets or retail databases and store them in CSV/Excel format for analysis.
Day 20	Data Connectivity	Connect the collected dataset to Tableau and verify successful data import.
Day 21	Data Preparation	Clean missing values, remove duplicates, rename fields, and create calculated fields for analysis.
Day 22	Dashboard & Story Creation	Design interactive dashboards and create Tableau stories to present insights effectively.
Day 23	Tableau Public Upload	Publish the completed dashboard to Tableau Public and verify online accessibility.
Day 24 – Day 25	Web Integration	Embed the Tableau dashboard into a web page using HTML and Tableau embed code.
Day 26 – Day 28	Documentation	Prepare project documentation including abstract, problem statement, methodology, dashboard explanation, and conclusion.
Day 29 – Day 30	Demo Video Making	Record a project demonstration video explaining objectives, dashboard features, and insights.
Day 31 – Day 32	Project Deployment	Deploy the project website/dashboard, perform testing, and prepare for final submission.

Total Project Duration: 32 Days

Milestones:

- Smart Bridge Training Completed (18 Days)
- Data Collection & Preparation Completed
- Tableau Dashboard & Story Developed
- Dashboard Published on Tableau Public
- Web Integration Completed
- Documentation Prepared
- Demo Video Created
- Final Project Deployment Completed

5.3 – Project Progress Tracking

Zoho Cliq was used as the primary communication and project tracking tool during the development of the Strategic Product Placement Analysis project. It provided a centralized platform for team collaboration, enabling members to share updates, discuss project tasks, and monitor overall progress efficiently.

The team used Zoho Cliq to coordinate daily activities, assign responsibilities, and track the completion of each sprint milestone. Important project resources such as retail datasets, Tableau worksheets, dashboards, stories, documentation files, and web integration code were shared through the platform, ensuring easy access for all team members. Regular discussions and notifications helped resolve technical issues quickly and kept everyone informed about the current status of the project.

Progress tracking through Zoho Cliq ensured that key activities—including data collection, data preparation, Tableau connectivity, data visualization, dashboard development, story creation, Tableau Public publishing, web integration, documentation, demo video creation, and final deployment—were completed according to the planned schedule. The platform also improved communication between team members and mentors by providing instant messaging, file sharing, and task coordination features.

Throughout the project, Zoho Cliq facilitated seamless collaboration among team members responsible for different tasks such as Tableau connectivity, dashboard development, story creation, web integration, and project management. The platform enabled efficient monitoring of project milestones, helping the team identify challenges, track task completion, and maintain project timelines effectively.

Overall, Zoho Cliq played a crucial role in maintaining transparency, improving collaboration, and ensuring the successful and timely completion.

5.4 – Team Management Tool for Agile Planning (Jira)

Jira was used as the Agile project management tool to plan, organize, and track the development activities of the Strategic Product Placement Analysis project. It helped the team manage tasks efficiently by dividing the project into smaller activities and monitoring their progress through different stages of development.

Key Features of Jira

- **Sprint Planning:** Organizes project work into sprints with defined timelines and objectives.
- **Task Management:** Creates, assigns, and tracks tasks with priorities and deadlines.
- **Kanban & Scrum Boards:** Provides visual boards to monitor task progress through To Do, In Progress, and Done stages.
- **Issue Tracking:** Records bugs, issues, and project challenges for quick resolution.
- **Real-Time Collaboration:** Enables team members to update task status and communicate effectively.
- **Progress Monitoring:** Displays project progress through dashboards and reports for better decision-making.
- **Workflow Automation:** Automates repetitive activities such as status updates and notifications.

Workflow of Jira in the Project

1. **Project Planning:** Define project objectives and create Agile sprints.
2. **Task Creation:** Break the project into smaller tasks such as data collection, data preparation, data visualization, dashboard development, story creation, web integration, testing, and deployment.
3. **Task Assignment:** Assign responsibilities to team members with due dates and priorities.

4. Sprint Execution: Team members work on assigned tasks and update their progress regularly.
5. Progress Tracking: Monitor task status using Jira boards and dashboards.
6. Issue Resolution: Identify and resolve technical issues related to Tableau dashboards, data processing, and website integration.

Benefits of Using Jira

- Improves project planning and organization.
- Enhances collaboration among team members.
- Provides real-time visibility of project progress.
- Simplifies task assignment and responsibility tracking.
- Helps identify and resolve issues quickly.
- Supports Agile methodology through sprint planning and management.
- Increases productivity by organizing work efficiently.
- Ensures timely completion of project milestones and deliverables.

Conclusion

Jira played a vital role in the successful execution of the Strategic Product Placement Analysis project by providing an efficient Agile project management environment. It enabled systematic sprint planning, effective task management, continuous progress tracking, and smooth collaboration among team members. The use of Jira improved transparency, accountability, and workflow management, ensuring that all project activities, including data analysis, Tableau dashboard development, story creation, web integration, testing, and deployment, were completed on schedule and the project objectives were achieved successfully.

CHAPTER - VI

PROJECT DEVELOPMENT

6.1 – Pre-Requisites

Tableau is a useful tool that helps us make sense of raw data by turning into easy to understand charts and reports. It is used by a lot of businesses and researchers to understand information and make better decisions.

Installation

Let's get Tableau on our computers.

Step 1: Tableau Website

We need to go to the Tableau website and find the products section.

Products

Step 2: Tableau Products

Tableau has a lot of ways we can use it including:

- Tableau Cloud: this is a cloud based platform that we can use to analyze data and share it with others without having to manage servers.
- Tableau Server: this is a platform that we can use on our servers either at home or in the cloud and it gives us full control over our data and analytics.
- Tableau Desktop: this is the tool we use to create visualizations and dashboards. It works even when we are not connected to the internet.
- Tableau Next: this is a platform that uses artificial intelligence to help us work smarter and get insights faster.
- Other Products: there are also tools like Tableau Prep for cleaning data Tableau Public for sharing visualizations, with everyone and Tableau Mobile for using Tableau on our phones.

We are going to download the Tableau Desktop version.

BRAVO
— BUILDERS —
—

Step 3: Select Tableau Desktop

Now we need to select the Tableau Desktop option. Then we have two choices:

- Start Free Trial
- Buy Now

Choose the one that works best for you.

Step 4: Installation

After we select an option the setup file will download. Then we need to open the file and follow the installation instructions.

Step 5: Setup

After Tableau installed we need to open the Tableau Desktop application and register.

Registration

Step 6: Tableau Desktop

Now that we are registered Tableau is ready for us to use. We can start making our charts and reports with Tableau.

PROJECT TITLE	Strategic Product Placement Analysis
MAX MARKS	5 MARKS

6.2 – Data Connectivity

Tableau Installation

1. Visit the [Tableau Official Website](#) and open the Products menu.
2. Review the available Tableau products:
 - Tableau Cloud
 - Tableau Server
 - Tableau Desktop
 - Tableau Next
3. Select Tableau Desktop and download the setup file.
4. Run the installer and follow the on-screen instructions to complete the installation.
5. Open Tableau Desktop and sign in or register with a Tableau account.
6. Activate the software (if required) and complete the setup.
7. Tableau Desktop is now ready for connecting data sources, creating visualizations, dashboards, and stories for the strategic product placement analysis Insights project.

6.3 – Data Preparation

CHART NAME	CHART TYPE
Avg Sales Volume by Product Category	Bar chart
Avg Sales Volume by Product Category on Sales	Stacked Bar Chart
Consumer Demographics vs Product Category	Donut Chart
Foot Traffic vs Sales Volume	Packed Bubble Chart
Competitor Price vs Price	Side By Side Bar Chart
Promotion of Product Category on Price and Sales Volume	Highlight Table
Product Category vs Price	Pie Chart
Avg Sales Volume by Product Category by Product Position	Tree Map

BRAVO
— BUILDERS —

Sheet – 1: Avg Sales Volume by Product Category:

1. Drag **Product Category** to Row shelf.
2. Drag **Sales Volume** to Column shelf.
3. Change the **Sum**(sales volume) to **Avg**.
 - i. Right on **Sum**(sales volume) Check measures select **Avg**.
4. Right click on **Product category** then select(ASCE or DESC)If we needed.
5. Drag **Product Category** to colors in the **marks card**.
6. In **marks card** click label check the show marks labels.
7. In top tools section select **Fit Height**.
8. If you need to change colors go to **marks card** select colors and click edit colors(Optional).
 - i. Clothing → orange
 - ii. Electronics → Green
 - iii. Food → Pink

OUTPUT:

Sheet --2: Avg Sales Volume by Product Category on Sales:

1. Drag **Product Category** to **Columns shelf**.
2. Drag **Sales Volumes** to **Rows Shelf**.
 - i. Right click in **sales volume** what we have already drag into **row shelf**. Choose for measures and change It to Avg.
3. In tableau right corner click **show me** choose **stacked bar**.
4. In marks card **select bar**.
5. Drag **Promotion** to colors in **marks card**.
6. Drag **sales(volume)** to label and then change it to **Avg**.
7. In top tools section select **Fit Width**.
8. In **marks card** click **size** and increase the size sightly.
9. Again marks card click **label** check the show marks label.
10. Right click on **Product Category** to (ASC or DESC) If we needed.

OUTPUT:

Sheet – 3: Consumer Demographics vs Product Category

1. In top tools section go to **Analysis** menu.
2. Create **calculate field**.
3. Type **Zero** File name. Then Under **formula:o**.
4. Drag **Zero** to **row shelf**.
5. drag **zero** to **row shelf** and place it right side of the **zero first** we place it.
6. Right click on **sum(zero)** choose **Dual axis** then it overlap it.
7. In marks card **select Pie**.
8. In **marks card** select **second sum(zero)**.
9. Then reduce the **size** slightly and select **white color**.
10. In **marks card** select **first sum(Zero)**.
11. Drag **consumer Demographic** to colors then **product category** to label.
12. In top tools section select **Entire view**.

OUTPUT:

Sheet – 4: Foot Traffic vs Sales Volume

1. Drag **Foot Traffic** to detail in the **marks Card**.
2. Drag **Product Category** to label in the **marks card**.
3. Drag **Sales Volume** to **size** in the **marks card**.
4. Drag **Foot Traffic** to **color** in the **marks card**.
5. In tableau top right corner click **show me**.
6. Select **Packed Bubbles**.
7. Drag **Sales Volume** again **Label**.
8. Click **Label** and check **Show Mark Labels**.
9. Use the **Size** slider to adjust bubble size if needed.
10. Format **colors** and labels as **desired**.

OUTPUT:

Sheet – 5: Competitor Price vs Price

1. Drag **Product Category** to **Column shelf**.
2. Drag **Competitor price** to **Row shelf**.
3. Right click on **sum(Competitor price)** change to **Avg**.
4. Drag **Price** besides the **Avg(competitor price)**.
5. Convert **Price** Sum to Avg.
6. Drag **measure values** to **rows**.
7. Drag **measure name** to **columns** next to **product category**.
8. Drag **measure name** to color in **marks card**.
9. Drag **measure values** to label in **marks card**.
10. In marks card click **Label** check the show marks label.
11. Click **size** in marks card move to right side slightly.
12. In top tools section choose **Fit Width**.

OUTPUT:

Sheet – 6: Promotion of Product Category on Price and Sales Volume

1. Drag **promotion** to **Rows shelf**.
2. Drag **Product Category** to rows right side of **Promotion**.
3. Drag **Price** to Label in **marks card**.
4. Drag **Sales volume** to label in **marks card**.
5. Right click on **sales volume** what we drop into label.
6. Then change into **Sum to Avg.** choose measure and click Avg.
7. Same right click on **Price** change to **Sum to Avg.**
8. In tableau top right to corner click **show me** then choose **Text table**.

OUTPUT:

The Tableau interface shows the following configuration:

- Columns:** Measure Names
- Rows:** Promotion, Product Category
- Filters:** Measure Names
- Marks:** Automatic (set to Text)
- Measure Values:** AVG(Price), AVG(Sales Volume)

Promot..	Product C..	Avg. Price	Avg. Sales Volume
No	Clothing	27	1,869
No	Electronics	27	1,726
No	Food	28	1,677
Yes	Clothing	29	1,781
Yes	Electronics	29	1,773
Yes	Food	29	1,782

Sheet – 7: Product Category vs Price

1. In **marks card** click dropdown arrow **select Pie**.
2. Drag **Product category** to color in **marks card**.
3. Drag **sales volume** to Angle.
4. After drop into **Angle** you change sum(sales volume) to Avg.
5. Again drag **sales(volume)** to label. Change sum to Avg.
6. Drag **Product Category** to label.
7. In **marks card** click color to **Edit color** if you needed
 - i. Clothing→Orange.
 - ii. Electronics→Green.
 - iii. Food→Pink.
8. In top tools section select **Entire view**.

OUTPUT:

Sheet – 8: Avg Sales Volume by Product Category by Product Position

1. Drag **Product Category** to **Columns**.
2. Drag **Product Position** to **Rows**.
3. Drag **Sales volume** to colors in the **marks card**.
4. After that change it **Sum to Avg**.
5. Again drag **Avg(sales)** to label.
6. In **marks card** click drop down arrow choose **square**.
7. In tableau top right corner click **show me** select **Tree map**.

6.6 – Publishing

Step 1: Prepare Your Dashboard 01

- Complete Dashboard 01 and verify that all charts, filters, and interactions are working correctly.
- Check titles, legends, and formatting for consistency.
- Remove any unused worksheets, dashboards, or data sources to reduce workbook size.
- Save your Tableau workbook.

Step 2: Sign in to Tableau Public

- Open Tableau Desktop.
- Click **File** → **Save to Tableau Public**.
- If prompted, enter your Tableau Public username and password.
- If you do not have an account, create one on Tableau Public.

Step 3: Save and Publish

- Enter a suitable workbook name such as:
- Strategic Product Placement Analysis – Dashboard 01 Enter a suitable workbook name such as:
- Click **Save**.
- Tableau uploads the workbook to your Tableau Public profile.

Step 4: View the Published Dashboard

- After publishing, Tableau automatically opens the dashboard in your web browser.
- Verify that all visualizations, filters, and dashboard actions function properly online.
- Copy the URL for future use in your project documentation and website integration.

Strategic Product Placement Analysis

Step 1: Prepare Your Dashboard 02

- Complete Dashboard 01 and verify that all charts, filters, and interactions are working correctly.
- Check titles, legends, and formatting for consistency.
- Remove any unused worksheets, dashboards, or data sources to reduce workbook size.
- Save your Tableau workbook.

Step 2: Sign in to Tableau Public

- Open Tableau Desktop.
- Click **File** → **Save to Tableau Public**.
- If prompted, enter your Tableau Public username and password.
- If you do not have an account, create one on Tableau Public.

Step 3: Save and Publish

- Enter a suitable workbook name such as:

Strategic Product Placement Analysis

- Strategic Product Placement Analysis – Dashboard 01 Enter a suitable workbook name such as:
- Click **Save**.
- Tableau uploads the workbook to your Tableau Public profile.

Step 4: View the Published Dashboard

- After publishing, Tableau automatically opens the dashboard in your web browser.
- Verify that all visualizations, filters, and dashboard actions function properly online.
- Copy the URL for future use in your project documentation and website integration.

Dashboard 02

Step 1: Prepare Your Story

- Complete all story points and ensure the narrative flow is correct.
- Verify that each dashboard and worksheet included in the story displays properly.
- Remove unused sheets and data sources.
- Save the workbook.

Step 2: Sign in to Tableau Public

- Open Tableau Desktop.
- Navigate to **File** → **Save to Tableau Public**.
- Sign in using your Tableau Public account.

Step 3: Save and Publish

- Enter the workbook name:
- Strategic Product Placement Analysis – Story Enter the workbook name:
- Click **Save** to upload the story to Tableau Public.

Step 4: View the Published Story

- Tableau opens the published story in your web browser.
- Review all story points, navigation buttons, and visualizations.
- Copy the published URL for documentation and website integration purposes.

CHAPTER – VII

FUNCTIONAL AND PERFORMANCE TESTING

7.1 – Performance Testing & Functional Testing

1. Connect Data

- Import dataset into Tableau.
- Ensure fields include Price, Competitors Price, Sales Volume, Product Category, Product Position, Consumer Demographics, Foot Traffic, and Promotion.

2. Create Calculated Fields

- Avg Sales Volume by Product Category.
- Price Difference = Price – Competitors Price.
- Sales Conversion Rate = Sales Volume ÷ Foot Traffic.

3. Build Visualizations

- Avg Sales Volume by Product Category vs Sales.
- Consumer Demographics vs Product Category.
- Foot Traffic vs Sales Volume.
- Competitors Price vs Price.
- Promotion Impact on Price and Sales Volume.
- Product Category vs Price.
- Avg Sales Volume by Product Category vs Product Position.

4. Add Filters

- Product Category.
- Product Position.
- Consumer Demographics.
- Promotion.
- Date Range.
- Store Location.

5. Create Dashboard

- Combine all visualizations into one dashboard.
- Add KPI cards for Total Sales, Average Price, Average Competitor Price, and Foot Traffic.

6. Perform Performance Testing

- Test filter response time.
- Test dashboard loading with large datasets.
- Apply multiple filters simultaneously for stress testing.
- Use Tableau Performance Recording to identify bottlenecks.

7. Optimize Performance

- Use Tableau Extracts.
- Apply Context Filters.
- Reduce complex calculations.
- Hide unused fields.
- Limit excessive marks in charts.

8. Analyze Results

- Identify best product positions.
- Evaluate promotion effectiveness.
- Compare pricing with competitors.
- Understand customer preferences.
- Measure impact of foot traffic on sales.
- Recommend optimal product placement strategies.

CHAPTER – IX

ADVANTAGES & DISADVANTAGES

9.1 – Advantages

Advantages of Strategic Product Placement Analysis

a. **Increases Sales Revenue**

Helps businesses place products in locations where customers are more likely to notice and purchase them, leading to higher sales.

b. **Improves Product Visibility**

Ensures important and high-profit products are displayed in prominent areas, increasing customer attention and purchase likelihood.

c. **Enhances Customer Shopping Experience**

Creates a well-organized store layout, making it easier for customers to find products and reducing shopping time.

d. **Supports Data-Driven Decision Making**

Uses sales, pricing, foot traffic, and demographic data to make informed merchandising decisions rather than relying on assumptions.

e. **Optimizes Store Layout**

Identifies the most effective product positions and shelf arrangements to maximize customer engagement and store performance.

f. **Improves Inventory Management**

Helps businesses understand product demand patterns, reducing stock shortages and excess inventory.

g. **Increases Effectiveness of Promotions**

Assists in placing promotional products in high-traffic areas, improving the success of marketing campaigns.

h. **Provides Customer Behavior Insights**

Analyzes customer preferences and purchasing patterns, helping businesses better meet consumer needs.

i. **Enhances Competitive Advantage**

Enables businesses to respond quickly to market trends and competitor strategies through informed placement decisions.

j. **Improves Resource Utilization**

Helps retailers make better use of shelf space, display areas, and store resources for maximum profitability.

k. **Boosts Overall Business Performance**

Combines multiple factors such as sales, promotions, pricing, and product positioning to improve operational efficiency.

l. **Supports Strategic Planning**

Provides valuable insights that assist management in long-term retail planning and business growth.

9.2 – Disadvantages

Disadvantages of Strategic Product Placement Analysis

a. **Dependence on Data Accuracy**

The effectiveness of the analysis depends on the quality of the data collected. Inaccurate data can lead to incorrect conclusions.

b. **Time-Consuming Process**

Collecting, cleaning, organizing, and analyzing large amounts of retail data requires significant time and effort.

c. **High Implementation Costs**

Businesses may need to invest in analytics software, data collection systems, and employee training.

d. **Requires Technical Expertise**

Proper analysis often requires knowledge of data analytics tools, visualization software, and statistical methods.

e. **Changing Customer Preferences**

Consumer buying behavior can change rapidly, making previous placement strategies less effective over time.

f. **Influence of External Factors**

Sales performance may be affected by seasonal trends, economic conditions, competitor actions, or market changes beyond product placement.

g. **Need for Continuous Monitoring**

Product placement strategies must be regularly reviewed and updated to maintain effectiveness.

h. **Complexity of Data Analysis**

Large datasets containing multiple variables can be difficult to interpret and manage accurately.

i. **Risk of Misinterpretation**

Incorrect analysis or misunderstanding of data patterns can result in poor placement decisions and reduced sales.

j. **Operational Disruptions**

Rearranging shelves and changing store layouts may temporarily affect normal business operations.

k. **Over-Focus on High-Selling Products**

Businesses may prioritize popular products while neglecting less visible products that also contribute to revenue.

l. **Limited Predictive Accuracy**

While analysis provides useful insights, it cannot fully predict future customer behavior or market conditions, creating some level of uncertainty.

CHAPTER – X

CONCLUSION

10.1 – Conclusion

Strategic Product Placement Analysis is a valuable retail analytics approach that helps businesses understand how product positioning influences customer purchasing behavior and sales performance. By examining key factors such as sales volume, product category, customer demographics, foot traffic, pricing, promotions, competitor pricing, and product position, organizations can make informed decisions about where products should be placed within a store to achieve maximum effectiveness.

The analysis enables retailers to identify high-performing product locations, optimize shelf space utilization, and improve overall store layouts. Proper product placement not only increases product visibility but also enhances the customer shopping experience by making products easier to find and access. Additionally, the insights gained from this analysis support better inventory management, more effective promotional strategies, and improved pricing decisions. These benefits contribute to increased sales, higher customer satisfaction, and greater operational efficiency.

However, the success of Strategic Product Placement Analysis depends on the availability of accurate and reliable data. Businesses must regularly update and monitor their data to ensure that placement strategies remain effective as customer preferences and market trends change over time. Factors such as seasonal demand, competitor activities, and economic conditions can also influence results and should be considered during analysis.

In conclusion, Strategic Product Placement Analysis is an essential tool for modern retail management. It combines data analysis, visualization, and business intelligence techniques to support informed decision-making and improve retail performance. By leveraging the insights generated through this analysis, organizations can optimize product placement, enhance customer engagement, increase profitability, and achieve sustainable business growth in a competitive retail environment.

CHAPTER – XI

FUTURE SCOPE

11.1 - Future Scope

Strategic Product Placement Analysis has a wide scope in the future because retail businesses are increasingly using data and technology to improve their performance. As the retail industry becomes more competitive, organizations need better strategies to attract customers and increase sales. Product placement analysis helps businesses understand customer behavior and identify the best locations for displaying products.

In the future, advanced technologies such as Artificial Intelligence (AI), Machine Learning (ML), and Big Data Analytics can be integrated with product placement analysis to provide more accurate predictions and recommendations. Businesses can use real-time data to understand customer preferences and make quick decisions regarding product positioning.

The growth of online shopping and omnichannel retailing also creates new opportunities for this analysis. Retailers can combine data from both physical stores and online platforms to gain deeper insights into customer purchasing patterns. This will help them develop more effective marketing and merchandising strategies.

Smart technologies such as IoT devices, smart shelves, and customer tracking systems can further improve product placement decisions by providing real-time information about customer movements and product performance. These technologies can help businesses optimize store layouts and improve the overall shopping experience.

Strategic Product Placement Analysis can also be applied in various sectors such as supermarkets, shopping malls, fashion stores, electronics stores, and e-commerce platforms.

In conclusion, the future of Strategic Product Placement Analysis is very promising. With the support of modern technologies and advanced analytics, businesses can make better decisions, improve customer satisfaction, increase sales, and achieve long-term growth in a highly competitive retail environment.
